PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in backend and API-driven software development. Experienced in building production-oriented web applications using FastAPI, PostgreSQL, and M-Pesa (Daraja) integrations, as well as ERP-integrated web portals using Laravel and AL (Microsoft Dynamics 365 Business Central). Strong foundation in relational database design, secure API communication, and scalable backend architecture. Seeking a software development internship to contribute to high-impact, enterprise-grade systems.

EDUCATION

Bachelor of Science in Computer Science

Kabarak University, Nakuru, Kenya
Expected Graduation: December 2026

Relevant Coursework: Data Structures & Algorithms, Database Systems, Software Engineering, Artificial Intelligence, Web Development

TECHNICAL SKILLS

Programming Languages: Python, PHP, JavaScript, TypeScript, SQL

Backend Frameworks: FastAPI, Flask, Laravel, SQLAlchemy

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Databases: PostgreSQL, SQLite

Enterprise & ERP: AL Language, Microsoft Dynamics 365 Business Central

APIs & Integration: REST APIs, M-Pesa Daraja (C2B/B2C), Web hooks

Development Tools: Git, GitHub, Postman, VS Code

EXPERIENCE

Web Portal Developer Intern

Iansoft Technologies | Jan 2026 – Mar 2026

- Contributed to development of a Laravel-based web portal integrated with Microsoft Dynamics 365 Business Central for a government ERP implementation.
- Analyzed and navigated structured MVC architecture and service-layer integrations within a large-scale PHP codebase.
- Studied AL extensions and backend communication between the web portal and Business Central server environments.
- Observed API-based and SOAP-based integration mechanisms for ERP data exchange.
- Gained exposure to live production system maintenance, including staged updates and zero-downtime deployment practices.

PROJECTS

Shirika Court I Management System – Finance & Contribution Platform

Tech Stack: FastAPI, PostgreSQL, SQLAlchemy, M-Pesa Daraja API

- Designed normalized relational database schema for tracking member contributions, service fees, and account balances.
- Implemented RESTful backend APIs using FastAPI with role-based authentication and authorization.
- Integrated M-Pesa Daraja APIs (C2B/B2C) with transaction validation, web hook handling, and reconciliation logic.
- Designed secure payment workflows with request verification and idempotent transaction tracking.
- Developed APIs structured for web and mobile consumption.

Construct Hub – Construction Planning & Cost Estimation Platform

Tech Stack: FastAPI, React, TypeScript, PostgreSQL

- Built full-stack platform for construction cost estimation, vendor discovery, and project planning.
- Designed database models and backend service layers using SQLAlchemy ORM.
- Developed RESTful APIs for structured data exchange between frontend and backend systems.
- Implemented AI-assisted contextual guidance features to enhance user decision-making.

Music Genre Classification System

Tech Stack: Python, TensorFlow/Keras, CNNs, Streamlit

- Developed deep learning model using convolutional neural networks for music genre classification.
- Processed audio spectrogram inputs and evaluated model performance using structured datasets.
- Built interactive Streamlit interface for testing and visualization of classification results.
